PROFESSIONAL SUMMARY

Computer Science and Artificial Inteligence Undergraduate with a Higher Diploma in Software Engineering and a broad IT and technology foundation. Hands-on experience across Android development, full-stack web development, database design, and SQL, built through practical academic projects: an Android digital printing application using Java, MVVM, and Firebase, and a PHP/MySQL travel platform with secure, role-based full-stack architecture. Working knowledge of computer networking fundamentals and academic exposure to AI/ML concepts through system design coursework. Seeking an internship, trainee, or junior/graduate opportunity across software development or broader IT/technology roles, with an interest in growing into more specialized technical career paths over time.

TECHNICAL SKILLS

Programming Languages: Java, Kotlin, PHP, JavaScript, SQL, Python

Web Development: HTML5, CSS3, Bootstrap 5, JavaScript, PHP, MySQL, PDO, Responsive Web Development

Android Development: Android Studio, Java, Kotlin, Android SDK, MVVM, Material Design, Firebase, Room Database, SQLite

Databases: MySQL, SQL, SQLite, Room Database, Firebase Firestore

Tools: Android Studio, Visual Studio Code, Git, GitHub, XAMPP, Firebase Console

Software Engineering: OOP, SDLC, Database Design, Software Architecture, Debugging, Testing, Version Control, CRUD, Authentication, Full-Stack Development

Additional Technical Knowledge: REST API concepts, JSON, Frontend/Backend Development, Database Integration, Computer Networking (IP Addressing, Subnetting, Network Design), academic exposure to AI/ML concepts and IT sectors

PROJECTS

PrintXpress | Android Digital Printing Service Application

Java, Android Studio, MVVM, Firebase (Authentication, Firestore, Cloud Storage), Material Design

- Developed an Android application for browsing digital printing products (business cards, posters, banners, flyers, stickers, mugs, T-shirts), managing a shopping cart, and placing print orders, applying MVVM architecture to separate UI, business logic, and data layers
- Implemented user registration, authentication, and profile management using Firebase Authentication
- Integrated Firebase Firestore and Cloud Storage for product data, order management, and file handling
- Built product browsing, category, and detail screens using Android activities, fragments, and adapters
- Debugged a category/slug mismatch bug that was causing empty product lists, restoring correct product filtering
- Designed the app's UI following Material Design principles for a consistent, usable experience

GlobeTrek Adventures | Travel & Tourism Web Application
HTML5, CSS3, Bootstrap 5, JavaScript, PHP, MySQL, PDO, XAMPP

- Built a full-stack travel and tourism platform from scratch supporting three user roles: Customer, Staff, and Administrator
- Designed and implemented the MySQL database and backend logic in PHP, using PDO prepared statements to prevent SQL injection
- Applied bcrypt password hashing and CSRF token protection for secure authentication and form handling
- Developed a responsive frontend using HTML5, CSS3, and Bootstrap 5, with AJAX-based search functionality
- Handled end-to-end frontend/backend integration and debugging across the application

SafeNation - Disaster Link | AI-Assisted Disaster Management System (Academic Project / System Design)
HTML5, CSS3, Bootstrap, JavaScript, PHP, MySQL, Python, Leaflet, OpenStreetMap

- Designed a disaster management and emergency response platform concept covering floods, landslides, fires, and storms, addressing disaster reporting, emergency alerts, and resource coordination
- Planned role-based access for citizens, volunteers, response teams, hospitals, and administrators/authorities
- Proposed interactive mapping functionality using Leaflet and OpenStreetMap for shelter and hospital locations
- Incorporated AI-assisted concepts for disaster severity classification and decision support, with multilingual support (English, Sinhala, Tamil) planned
- Applied database design and system architecture principles to structure the proposed platform

NWSDB - Service-Oriented Water Billing & Payment System (Academic Project)
ASP.NET Core Web API, C#, .NET, SQL Server, Entity Framework Core, REST APIs, ASP.NET Core MVC

- Developed a service-oriented water billing and payment system with independent NWSDB and Bank APIs
- Implemented customer management, bill tracking, water usage monitoring, and payment history features
- Integrated RESTful APIs with a simulated payment gateway for transaction processing
- Built customer and third-party web applications using ASP.NET Core MVC
- Applied SOA principles, database separation, and API testing to improve modularity and maintainability

EDUCATION

BSc (Hons) Computer Science and Artificial Inteligence University (Via ICBT Campus/ Cardiff Metropolitan University)
Present | Expected graduation: 2028

Higher Diploma in Software Engineering - ICBT / Cardiff Metropolitan University
Completed, 2026

Additional Qualifications:
Artificial Intelligence - QB(UK) Level 5 (Reading) |
Information Technology - QB(UK) Level 5 (Reading) | English - QB(UK) Level 5 (Reading) |
Account and Finance - QB(UK) Level 5 (Reading) | Diploma in Psychology (Completed) |
Diploma in English (Completed)

LANGUAGES

- English - Fluent
- Tamil - Native
- Sinhala - Conversational
